Enable Active Scripts/Javascript in Internet Explorer

The FT Data Web requires that JavaScript and Active X scripts are enabled in the web browser. The following steps describe how to enable required elements of the web browser for functionality to be complete.

- 1) **Open Internet Explorer.**
- 2) On the menu at the top **click Tools, then Internet Options.**

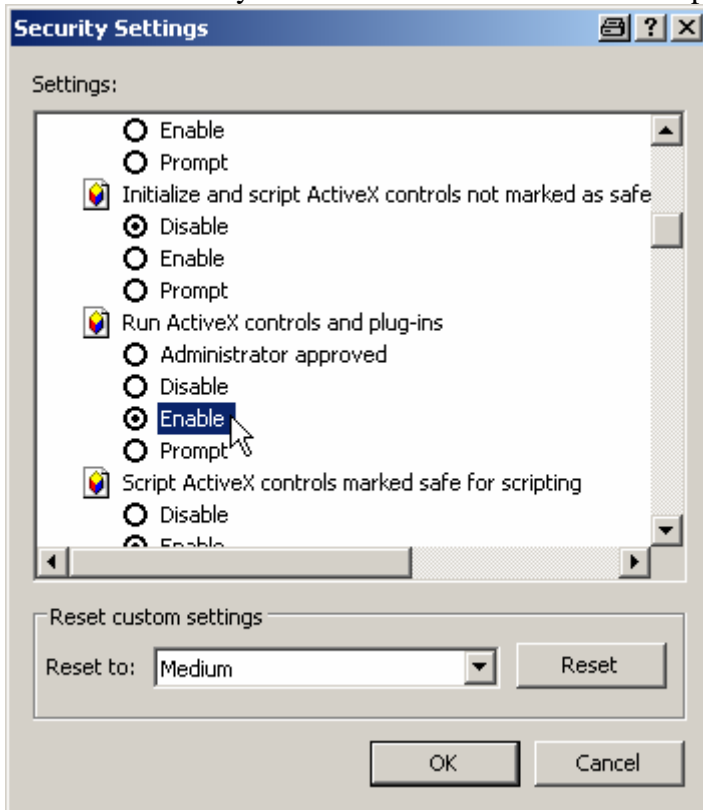

- 3) **Click the Security Tab then Custom Level.**

Enable Active Scripts/Javascript in Internet Explorer

- 4) Scroll down until you see Run ActiveX Controls and plug-ins. **Change this setting to Enable.**

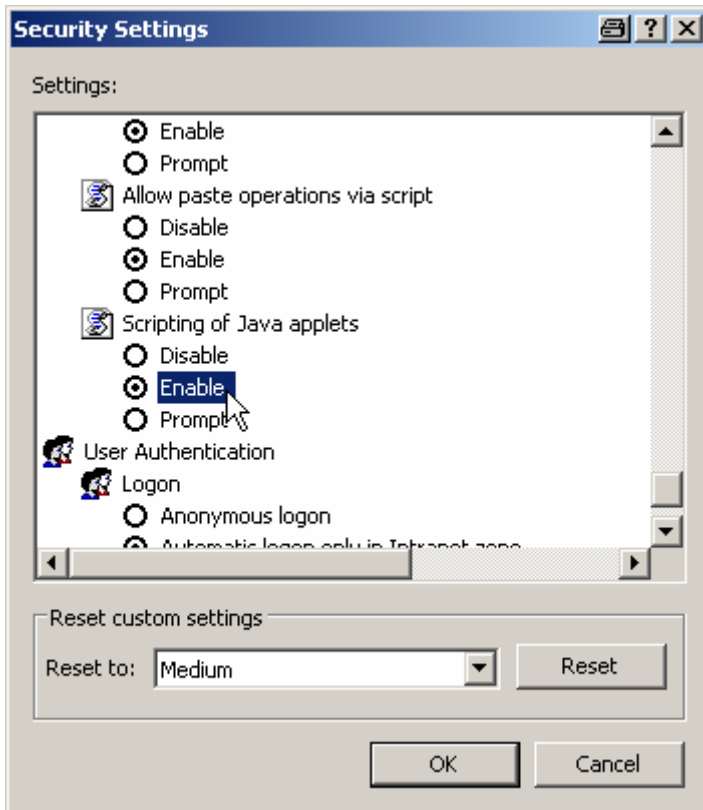

- 5) Continue to scroll down until you see Active Scripting. **Change this setting to Enable.**

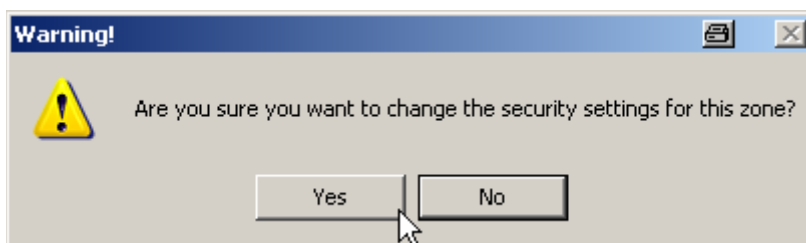

Future Technologies Support Documentation

Enable Active Scripts/Javascript in Internet Explorer

- 6) Continue to scroll down until you see Scripting of Java applets. **Change this setting to Enable.**

- 7) Click OK to close the Security Settings window.
- 8) If prompted to save the security settings select Yes to save the changes.

- 9) Click OK to close the Internet Options window.
- 10) Close all open Internet Explorer windows.
- 11) Log on to the FT Data Web to see if the problem has been resolved. If the problem has not been resolved by making these changes please send an email to webmaster@futuretechllc.com to report the problem.
